

ABLE DEVICE ANNOUNCES COMMERCIAL RELATIONSHIP WITH TRANSACTION NETWORK SERVICES INC.

Able Device to provide SIMbae™ for enhancing Quality of Service and Service Assurance in TNS' mobile offerings.

Raleigh, NC, October 17, 2018 – [Able Device](#), a pioneer in SIM-based IoT/M2M application technology today announced an agreement to provide [Transaction Network Services Inc.](#) (TNS) with its flagship product, SIMbae, to enhance the Quality of Service (QoS) and Service Assurance (SA) of TNS' mobile offerings.

[SIMbae](#) by Able Device is a light-weight applet that embeds on any standard Subscriber Identity Module (SIM) or eUICC, providing standards based IoT device connectivity and network management tools. SIMbae's innovation is centered on enabling the SIM to execute programs independently of the baseband or application processor to control device components such as the communications module. Because SIMbae adheres to all 3GPP standards, it does this without the need for the IoT Service Provider to change the deployment of their existing standard network elements and end point IoT devices.

"We're excited that TNS selected SIMbae as part of their leading-edge mobile solutions offering," said Roger Dewey, CEO of Able Device. "Our agreement illustrates the benefits of SIMbae across the IoT solution value chain," concluded Dewey.

About Able Device

Able Device is a provider of technology for Mobile Network Operators (MNOs), IoT Service Providers, and mobile IoT device OEMs. Its flagship product SIMbae™ (short for "SIM based application engine") enables hosting of IoT device controls and applications on standard SIMs. In this new architecture, the SIM is transformed to an intelligent independent processor. As SIMbae utilizes established and common 3GPP SIM standards, IoT controls and applications implemented this way become device and carrier agnostic - with benefits including shorter time to market, reduced development cost, lower operating cost, and improved security. Based in Raleigh, NC, Able Device serves a global customer base. For more information, visit www.abledevice.com.

About Transaction Network Services

Transaction Network Services (TNS) is a leading global provider of data communications and interoperability solutions. TNS offers a broad range of networks and innovative value-added services which enable transactions and the exchange of information in diverse industries such as retail, banking, payment processing, telecommunications and the financial markets.

All products/services and trademarks mentioned in this release are the properties of their respective companies.
